

New Headway Upper-Intermediate NEW Wordlist.pdf

The allinen series the original Coup new tunes ES the learning of and motivatio. Liz and John Soars.Q: Google Maps drag events - map click event I am trying to make the map drag events work, but I'd like to be able to prevent clicks while the map is being dragged. I can't find any such functionality in the API docs, so it seems like it's not possible. Unfortunately, I cannot find any other examples of dragging google maps, and I'd like to be able to use the API instead of just using the functionality provided by the Google Maps API web site. If anyone could shed some light on how to do this, I'd greatly appreciate it. Thanks A: I would guess that this was never intended to be possible by the Google Maps API team. They provide lots of convenience methods for making do-your-thing-with-your-location applications, and they want you to write only what Google has spent money on designing the API for. They see it as a "gap" in their APIs, and if you try to "abuse" this gap by adding functionality that they didn't think about, you get a bad case of "GOOGLE MAPS API HIJACKER! I WILL BRUTALIZE YOU!" I'd suggest using the Google Maps API web site's DragAndDrop functionality in the mapping services instead, or writing your own drag and drop functionality.

1. Field of the Invention The present invention relates to a method of manufacturing an optical waveguide of a tapered shape, and more specifically, relates to a method of manufacturing an optical waveguide of a tapered shape which has the opposite surfaces of one plate shape and one flat surface, and realizes an adhesion-free shape of one plate by bending a metallic plate material used for the optical waveguide.

2. Description of the Related Art Conventionally, it is known that an optical waveguide such as a single-mode optical fiber or a multi-mode optical fiber is generally manufactured by processing a glass plate material. Especially, for a multi-mode optical fiber, there is a method of manufacturing the optical waveguide by drawing the glass plate material. For example, a method of manufacturing a multi-mode optical fiber of a fusion-splicing type is disclosed in
